- Person or entity in question entered the right information
- Information is authentic and complete

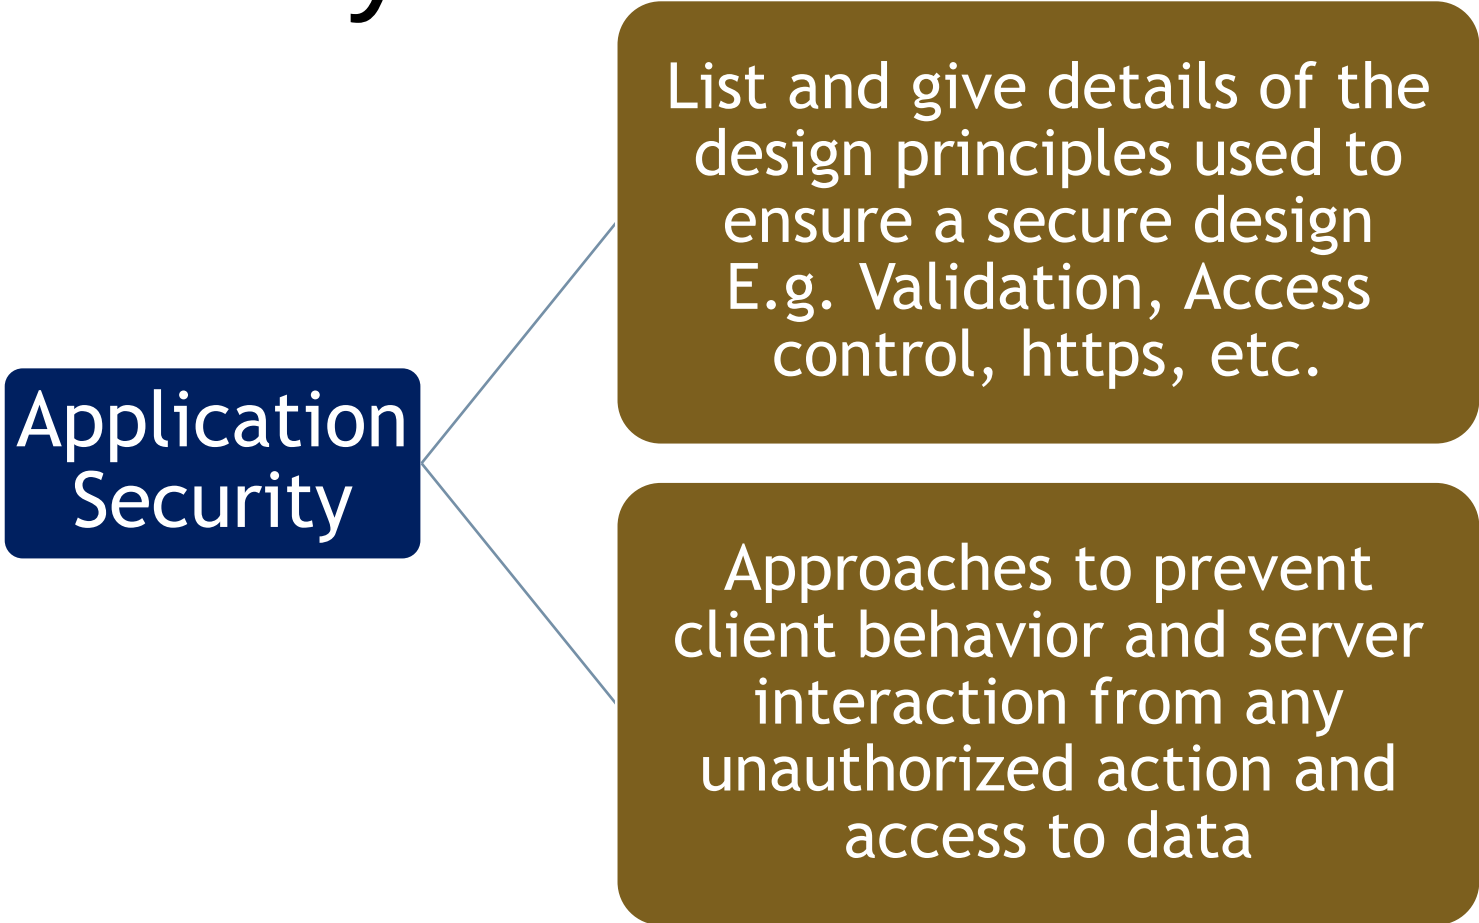

Availability

- Information are accessible to authorised users when needed

How is ensure application security?

Application Security

```
graph LR; A[Application Security] --- B[List and give details of the design principles used to ensure a secure design  
E.g. Validation, Access control, https, etc.]; A --- C[Approaches to prevent client behavior and server interaction from any unauthorized action and access to data]
```

List and give details of the design principles used to ensure a secure design
E.g. Validation, Access control, https, etc.

Approaches to prevent client behavior and server interaction from any unauthorized action and access to data

Final Roles & Responsibilities

**Person 1
(Team lead)**

**ERD Diagram, Project Plan, Flowchart,
Transaction Page, User Page**

Person 2

**Background, Objective, User Priveleges,
Login Page. Admin Page**

Person 3

.....

List any outstanding issues/functions that you have not managed to solve during the project.

For each issue, give a recommendation on how it may be resolved.

Give at least 2 suggestion on how your application may be enhanced.

Outstanding Issues

Deployment

List the steps required to deploy your applications.

Imagine that you have zip up your project and you intend to pass to another person to run on his machine.

Include a *readme.txt* file documenting the following:

- ⇒ Describe the folder structure of the applications
- ⇒ What are the steps to setup the following
 - ⇒ Database
 - ⇒ Application
- ⇒ Highlight any specific setup required

Why do you need to perform the pentest?

List down what tools you use to pen test.

How to install and run the pen test tools? Screenshots?

What are the results of pen testing?

Explain if the pen test result is valid. Instruction for remediation.

Penetration Test Results
